CALEB looks at the orb in his hand. Into the shimmering liquid.

IT LOOKS LIKE DEEP SPACE, FILLED WITH STAR FIELDS.

NATHAN (CONT'D)
My competitors were fixated on sucking it up, and trying to monetize via shopping and social media. They thought engines were a map of what people were thinking. But actually, they were a map of how people were thinking: impulse, response, fluid, imperfect. Patterned, chaotic.

CALEB looks at NATHAN a moment.
Then hands him the orb back.

CALEB
Why did you want to show me this?

NATHAN
Like I said. Because it's cool.

CALEB waits.

NATHAN (CONT'D)
And - I was thinking about your exchange with Ava yesterday, and our conversation afterwards.

Beat.

NATHAN (CONT'D)
I know there was a bit of heat between us, but you actually made a really good point. About the grey box, and the

CALEB
In college, I did a semester on AI theory. There was a thought-experiment they gave us. It's called Mary in the black-and-white room.

Beat.

CALEB (CONT'D)
Mary is a scientist, and her specialist subject is colour. She knows everything there is to know about it. The wavelengths. The neurological effects. Every possible property colour can have.

Beat.

CALEB (CONT'D)
But she lives in a black-and-white room. She can't see the world outside. And she can only observe the outside world on a black-and-white monitor. All her knowledge of colour is secondhand.

EX MACHINA

Halfway through her classic 1818 horror story, Mary Shelley depicts the making, and then, quickly, the bloody unmaking, of a female monster. Dr. Frankenstein has heard the entreaties of his lonely creation who begs his maker for a mate, a partner with whom he can share in the disappointing business of life. Dr. Frankenstein at first acquiesces and then, overcome by fear of a "race of monsters," he tears the hybrid creature to pieces and condemns his monster to a solitary existence. And so, in one of the most famous and mythic modern creation stories ever, a scientist refuses to make a female creature on the grounds that it may reproduce. Perhaps only a young woman like Mary Shelley would fail to see the appeal of the female monster. For her, the exact two hundred years later, stories in which men appropriate the God-function and revolve specifically around the female alone - a monster brought to life to serve her male mate, specifically, her maker.

The truth is, as Dr. Frankenstein discovered, that men are totally dependent upon female reproduction. And so we find a long tradition of masculinist fictions that reverse the order of things and make the male body into a sole reproducer. Maria, Eve, Ava, Rachael (which is the Hebrew term for the exact two hundred years of creation when women inevitably result in "female names"; Eve and Marys mostly, women who give their evidence to a man who by implication becomes a god. In *Ex Machina*, Nathan, the AI creator, and his

First, over BLACK, we hear... *The SOUND of the ocean, then...*

FADE IN:

EXT. 58TH TERRACE/13TH AVE - DAY

A bright Miami day. Or what we can see of it: our gaze fixed, looking into the front windshield of a wide, vintage car (think '60s, American).

At the wheel find JUAN (30s, some sort of Afro-Latino thing about him) pulling toward us and coming to a stop. Behind him, a shady, run-down apartment building abuts the road, three boys standing outside it.

Juan cuts his engine, exits the car and begins across the street. The boys tense up as Juan approaches, make room as he continues all the way over to the brick wall behind them.

JUAN
Business good?

One of the boys, TERRENCE (18, dreadlocks and rail-thin), bows his chest to speak.

TERRENCE
Business good. Everybody cleaned out, it's in the cut if you want it.

Juan just nodding his head, looking at the ground stretching before them, kind of day where phosphorescent fumes wave above the asphalt.

JUAN
Hold on to that, register don't empty till' the weekend, feel me?

Robert Eggers and David E. Hall

A tiny farm. A fragile family. A rigorous, windswept faith. A wilderness trapping the mind and the soul. We're in the business of giving the wrench of leaves, violence, the whinge of clouds, and wind, and prayer. Our eyes adjust to candle light and infinite darkness. The Witch in every frame, immerses us in the gray lens and cold nightmares of seventeenth century Puritan reparation.

To build this extraordinary world, writer and director Robert Eggers devoured folktales, fairy tales, everyday Puritan diaries, court records, historical documents, and even the Puritan's own maps of the New World and agricultural practices. The scholarly work of Professor David D. Hall of Harvard Divinity School was particularly influential. In *Witch-Hunting in Seventeenth-Century New England: A Documentary Reader*, Hall provides a detailed history of the Puritan's religious culture of local witch lore, and *Witches: Days of Judgment: Popular Religious Belief in Early New England* recapping the various dimensions of the Puritan's interconnected world.

Here, Eggers and Hall discuss the sadness and soaring of Puritanism, the sources and inspirations behind their projects, and the process of its sonority and interpretation.

Robert Eggers' W's an honest no spin with you.

David D. Hall: We're here in the business of trying to understand it. So let's just go ahead and represent it. So let's just go ahead.

RE: *Witch* again. You building your next movie? *The Lighthouse*? or it's a completely different and difficult process to go back to

EE

So, let me just start by saying that your film really captures, and does capture, the mysteriousness that surround darkness and religious principle in the seventeenth century. It's a very important time for that matter. You know, Puritanism is a cut-and-dried thing.

Provo, UT 84604

SEP 19, 2020
3:40PM

Dear Mr. Cantrell,

"Out of site" the phrase is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially unchanged. It was popularised in the 1960s with the release of Letraset sheets containing Lorem Ipsum passages, and more recently with desktop publishing software like Aldus PageMaker including versions of Lorem Ipsum.

Contrary to popular belief, Lorem Ipsum is not simply random text. It has roots in a piece of classical Latin literature from 45 BC, making it over 2000 years old. Richard McClintock, a Latin professor at Hampden-Sydney College in Virginia, looked up one of the more obscure Latin words, *consectetuer*, from a Lorem Ipsum passage, and going through the cites of the word in classical literature.

Many desktop publishing packages and web page editors now use Lorem Ipsum as their default model text, and a search for 'Lorem Ipsum' will uncover many web sites still in their infancy. Various versions have evolved over the years, sometimes by accident, sometimes on purpose (injected humour and the like).

There are many variations of passages of Lorem Ipsum available, but the majority have suffered alteration in some form, by injected humour, or randomised words which don't look even slightly believable. If you are going to use a passage of Lorem Ipsum, you need to be sure there isn't anything embarrassing hidden in the middle of text. All the Lorem Ipsum generators on the Internet tend to repeat predefined chunks as necessary, making this the first true generator on the Internet.

Best,
Gunnar Harrison

GREAT SALT LAKE, THE YEAR 1959, AND ASTROBIOLOGY:

Questions With Bonnie Baxter, Ph.D.

Gunnar Harrison (GH): You've lived in Utah for quite some time but I'm curious about what brought you to the valley and how you found yourself studying Great Salt Lake (GSL)?

Bonnie Baxter, Ph.D. (BB): I'm originally from North Carolina, and I grew up camping on lakes and at the ocean, and otherwise playing in the water. In that respect, Utah's salty lake was a significant draw to me. I always loved being outside, but I worked inside, studying biochemical questions. Scientifically speaking, I was interested in how DNA gets damaged and the cellular mechanisms that fix that damage. When I was applying for jobs in the west (so that I could explore mountains and deserts in my free time), I started thinking about how organisms that live in extreme environments might deal with the DNA-damaging effects of their surroundings. When I was successful and found a professor job in Utah, I knew I would focus my research on GSL. It turned out to be a timely choice as no one was

studying the extremophiles that time, and I stepped into scientific questions.

In 1959 a railroad causeway was built across Great Salt Lake, bisecting the lake in half. Can you briefly explain the color variation between the north and south sides?

Microbiology. (Too brief!?) Of this enormous lake effect, the water input to the north is much saltier. The high salinity supports different microorganisms, which have to protect them from harsh conditions. My lab studies carotenoids (which are among plants that produce pigments), which are antioxidants in the world, when you have to make water salt-saturated. This pigmentation occurs due to organisms that produce carotenoids. The south arm gets more water input from the snow in the Wasatch Mountains. It's still much saltier than the north, but the number of algae species that can photosynthesize and produce chlorophyll in these microorganisms makes part of the lake more green.

If the causeway did not exist, would the lake still experience the color variation we see today?

During times of low precipitation in the 1930s and 1960s, there were regions that were pink-pigmented because they were segmented from the main lake. So maybe we would see those color variations, but not to this extent.
